TOTAL SCORE (MAX 100)				ASSESSORS SIGNATURE		SCORE CHECKER'S INITIALS	

MEDICAL GUIDELINES		BASIC (0 - 3)	EFFICIENT (4 -7)	THOROUGH (8 - 10)
APPROACH & ASSESSMENTS	APPROACH/HAZARD IDENTIFICATION	Lack of concern for casualty, slow approach to patient, no hazard assessment	The scene is surveyed for what is involved. Hazards identified but not fully addressed	Systematic 360 survey, relevant hazard/planning information gathered and addressed, leading to thorough patient care
	PRIMARY SURVEY	Limited attention to ABC's and other life threatening injuries	ABC's (to include major haemorrhage assessment) conducted and significant abnormalities addressed immediately	Respiratory status assessment conducted and major bleeding addressed
	SECONDARY SURVEY	Basic approach to secondary survey, no vital signs established	Systematic approach to secondary survey, some vital signs measured	Thorough systematic secondary survey (to include GCS, head to toe, front to back, perfusion and pain assessment)
TREATMENT, TRIAGE & PLANNING	MANAGE LIFE THREATENING CONDITIONS	Life threatening condition not addressed resulting in basic care and patient deterioration	Life threatening condition found and efficiently dealt with.	Life threatening condition found and systematically treated resulting in positive patient outcome
	TREATMENT & EXTRICATION PLAN	Injuries not taken into account for planning	Patient care goals and plan communicated	Team approach to treatment and extrication plan with goal in place
	TREATMENT	Locates most injuries and some basic treatment	All significant injuries identified and treated accordingly	All significant and minor injuries are identified and treated accordingly
	RE-ASSESSMENT	Basic re-assessment of ABC's, injuries and treatment.	Efficient re-assessment of ABC's, injuries and treatment	Thorough re-assessment of ABC's, injuries and treatment
HANDOVER	HANDOVER OF PATIENT	Basic handover of patient no history of events and injuries	Efficient handover with good history, injuries patterns and vital signs allowing for ongoing care.	Thorough handover with history, detailed injury pattern, vital signs care given and dx of patient injuries.
WORK	MEDICAL EQUIPMENT	Poor location/staging of equipment for entry/egress/contamination	Correctly utilises appropriate equipment and no egress or contamination issues.	Manages equipment. Staging equipment safely and all equipment used appropriately
	EFFICIENCY	Basic planning leads to delays in work activity and goals not met	Efficient planning leads to outcomes in patient care.	Thorough planning lead to positive patient care
